PROFESSIONAL SUMMARY

Frontend developer building React applications that consume live APIs — searchable, multi-page interfaces with routing, API-driven data, and responsive layouts deployed on Vercel. Also built CHIMERA, a zero-dependency Python DAG workflow engine with event-sourced persistence and crash recovery (69 adversarial tests passing, MIT open source).

INDEPENDENT PROJECTS

Independent Frontend Development Jul 2026 – Present

Lucknow, India

- Built debounced search with a custom React hook (400ms delay) in FRAME's movie discovery feed, so results filter only after typing settles instead of on every keystroke.
- Implemented API loading and error states in GitHub Profile Explorer's profile fetch flow, showing loading feedback while fetching and a user-facing error message when a username is not found.
- Implemented client-side routing with React Router in GitHub Profile Explorer, so search, profiles, and repositories behave as a multi-page application.
- Built responsive layouts that adapt across screen sizes for React applications, and deployed them on Vercel with Git-based version control.

PROJECTS

GitHub Profile Explorer Live Demo · GitHub

- React and Tailwind application integrating the GitHub REST API to search users and explore profiles, repositories, and statistics.
- Implemented search and a fully responsive layout; deployed on Vercel.

AI Stadium Guide (PromptWars Challenge) Live Demo · GitHub

- AI-powered stadium assistant for FIFA World Cup 2026, built with React, Vite, and Google Gemini AI — conversational UI for ticket guidance, seat recommendations, food delivery, and event booking.

FRAME Live Demo · GitHub

- Movie discovery app built with React 19 and Vite — real-time search, genre browsing, and filter/sort by popularity, rating, and release date.
- Side-by-side comparison studio for up to three films, plus a personal cinema library with watchlist, watched tracking, custom collections, ratings, and notes; responsive dark-themed interface.

CHIMERA GitHub

- Built CHIMERA, a zero-dependency Python DAG workflow engine with event-sourced persistence, crash recovery, monotonic fencing tokens, and process-isolated timeouts — 69 adversarial tests passing, MIT open source.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), C++, Python

Frontend Development: React.js, React Hooks, React Router, HTML5, CSS3, Tailwind CSS, Vite, Framer Motion, Responsive Design, Component-Based Architecture

APIs & Integration: REST APIs, GitHub REST API, Google Gemini AI, LLM APIs

Development Tools: Git, npm

Backend & Data: Supabase

AI-Assisted Development: Claude, OpenAI Codex

Deployment & Version Control: Vercel, GitHub

EDUCATION

Indira Gandhi National Open University (IGNOU) 2025 – 2028

Bachelor of Computer Applications (BCA) · CGPA: 6.2

- Coursework: C, C++, Python, Data Structures

Class 12 (PCM), UP Board 2025

Lucknow, India

CERTIFICATIONS & ACHIEVEMENTS

- **Google Cloud Gen AI Master Certificate** — Google Cloud Gen AI Academy (Aug 2025)
- **MLOps for Generative AI** — Google Digital Academy (Jul 2026)
- **SQL (Intermediate)** — HackerRank
